1. The German credit data set was obtained from the UCI Machine Learning Repository. Please visit the page for a description of variables.

https://archive.ics.uci.edu/ml/datasets/Statlog+%28German+Credit+Data%29

2. Load the data by using:

credit <- read.table("german.data",header=FALSE)

3. Enjoy the analysis 😊

4. Once done, you may check the following resources to see how others analyse this dataset. Have you done a better job than them?

https://rpubs.com/gabrielmartos/discriminantR (study case III)
